Is your solar photovoltaic system performing at 100%? Are you on-track to meet your efficiency goals? How will you know if something is not right? Noveda's real-time web-based SunFlow Monitor™ can tell you all this and much more.

With engaging visuals and industry-leading monitoring frequency, SunFlow Monitor™ provides the context that is normally missing in renewable energy data. With meaningful graphics, analysis based alerts, detailed reporting and complete data export flexibility, SunFlow Monitor™ gives you the answers, not just the details.

Making the world greener, one building at a time.

Your efforts in sustainability and in utilizing renewable energy are important to your community, your employees, and your customers. Dynamic visualizations not only inform those around you about your efforts, but engage them in helping you achieve your goals for environmental stewardship.

Inform, educate, and motivate everyone who interacts with your business through kiosk displays and web access to real time data about how green you are.

- Maximize system performance and efficiency through real-time monitoring down to ten second intervals
- Provide real time information about energy production, energy consumption, greenhouse gases and weather
- Real-time alerts via email and sms text messages regarding system and component performance
- Complete renewable energy credit management including auto submission to your state or utility
- Automated billing information for PPA providers
- Independent third party data collection, analysis and reporting using revenue grade meters for data collection
- Historical data storage and reporting of electrical production, consumption, weather, and other critical elements
- Download data into several formats for more advanced analysis and reporting
- Anytime, anywhere access via web-enabled mobile devices
