AQUA-RIMAT

iQuatic™ Intelligent Water Monitoring Platform

The iQuatic™ Intelligent Water Monitoring Platform provides web-based, real-time monitoring of water use along with leak detection and control.

The iQuatic™ platform combines Noveda's industry leading real-time monitoring dashboard with Aqua-Rimat's innovative LEAK BUSTER water leak detection technology. Studies consistently show that the best way to conserve water use is to show people precisely how much they are using. For example, the Noveda real-time monitoring dashboard enables customers to manage their consumption and achieve 5-15% water savings, on average.

While excessive water consumption leads to increased spend, water leaks can be equally or more costly, with one-third of all business downtime a direct result of water damage situations. This is where the LEAK BUSTER technology comes in. Using a patented smart learning adaptive system (SLAS), the LEAK BUSTER tracks water consumption patterns to detect leaks and controls them in real-time.

Meaningful graphics, analysis based text/email alerts, detailed reporting and complete data export flexibility give you the answers, not just the details.

Whether you're a commercial or a residential customer, we'll help you see water through a different lens.
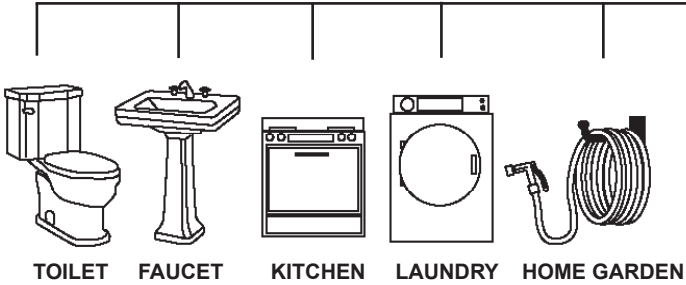

Real Benefits. In Real-Time.

Key Features:

- **Real-time monitoring of water use**
- One minute interval reporting
- Web-based data access

- **Real-time leak detection and control (24/7 leak protection)**
- Customizable alerts (text, email), including leak notifications

- **Display current, daily, monthly, and yearly usage data**
- View real-time data against user defined benchmarks such as budget, baseline, national average etc.

- In-depth data analytics with export capability
- Web based data storage at 1 minute intervals of historical consumption data
